

FutureFirst

A formulation with a specific fatty acid profile enriched in sn-2 palmitate obtained from an enzymatic interesterification process of refined vegetable oils and fats (palm oil, palm kernel oil, canola oil, sunflower oil) and natural antioxidants (tocopherols) that ensure its stability, excellent performance and mimics breast milk.

Key Benefits

- Enhances digestibility and reduces calcium soap formation.
- Reduces constipation and bowel disorders in infants.
- Muscle tissue and skeletal system development.
- Provides a greater source of energy.
- Improved absorption of fat-soluble vitamins and minerals.
- The raw materials used in the production of this product do not contain GMOs and are not produced from GMOs.
- The raw material can be traced back to its sources.

Applications:

Specialty fat designed for the manufacture of infant formula products and applications like pet nutrition and dairy.
